SWOT Analysis

Strengths

- Everyone can give their opinion on things when the team is deciding on what to do
- Everyone is up to date with the current progress
- There are people very good at HTML, CSS, and/or JS
- People that were familiar with html/css/js helped teach others in-person and over zoom

Weaknesses

- Hard for everyone to meet together because of conflicting schedules
 - Hard to do things such as mobbing
- Not everyone can respond in a timely manner
- Planning out how to do things
- Had to self teach HTML, CSS, JS before could contribute
- Communication channels were not effectively used.
- Not everyone on the team was coordinated.

Opportunities

- Long zoom session people can join when available and leave when they have to go
 - Helps combat the schedule conflicts
- Using the issue feature on github for ideas/fixes
- Work on our own versions (branches) to show what we already know to form future teams
- Separating each issue into a separate branch, making it easier to deal with problems 1 by 1

Threats

- Low bus factor
 - Couldn't have gotten warm up done without some people
- No proper deadlines for each assignments
